Projects

HOLIDAY TRAVEL WEBSITE:

Feb'24

Role: Full Stack Developer

Tech Stack: Bootstrap, PHP, MySQL

- Designed and developed a hotel reservation module, enabling users to search for hotels based on location, dates, and price range, enhancing user convenience.
- Implemented a booking system to allow users to submit reservation requests and track booking statuses.
- Developed an admin panel with functionality to bulk-upload hotel data using Excel and automate flash sales using cron jobs, reducing manual effort and enabling dynamic pricing.
- Optimized backend performance, ensuring seamless data management and faster query execution.

ACTIVITY, TRANSFER MODULE:

Des'23

Role: Full Stack Developer

Tech Stack: Bootstrap, PHP, MySQL

- Integrated leading activity and transfer APIs into travel platform, expanding travel options for enriched user experience.
- Developed a user-friendly search interface for activities and transfers, allowing users to filter by location, date, and type.
- Improved decision-making and customer satisfaction through streamlined activity and transfer booking functionality.

CRM MODULE:

Aug'23

Role: Full Stack Developer

Tech Stack: Bootstrap, Javascript PHP, MySQL

- Enabled offline data entry for customer and booking details via a CRM mobile app and desktop application.
- Applied an agent search feature for retrieving previous invoices and pre-filling forms for new customers.
- Enhanced efficiency by streamlining access to historical booking information for agents.
